

Figure 7 – Results of biological annotation of genomic intervals of the third subset

Note: a – association of genes within intervals of the third subset with diseases according to <https://diseases.jensenlab.org/> portal (terms of gene-associated diseases were selected when z-score > 5); b–associations of genes within intervals with predicted age-associated and tissue-specific expression changes according to VoyAGer web tool (adjusted P-value ≤ 0.05)
